Aftermarket Services

Inspection + Commissioning

Inspect + Assure.

Applications

- Drilling equipment
- Rig structures
- Mechanical systems
- Electrical systems
- Offshore rigs
- Land rigs
- New installations
- Existing equipment

Confidence in Equipment Condition. Confidence in Operation.

Reliable equipment performance starts with knowing that systems are correctly installed, commissioned, maintained and fit for continued operation.

We support equipment from initial installation and commissioning through ongoing inspection, maintenance and recertification, helping customers identify issues, maintain integrity and protect equipment availability.

Our teams combine practical field experience with OEM and engineering knowledge to understand not simply whether equipment meets requirements, but what is needed to maintain safe, reliable performance throughout its operational life.

Know the Condition. Reduce the Uncertainty.

Equipment condition changes over time. Operating environment, duty cycles, wear, maintenance history and equipment age can all affect reliability and integrity. Without structured inspection and maintenance, emerging issues can remain unidentified until they affect operations.

At the same time, over-maintaining equipment creates unnecessary cost and disruption.

Customers need an informed understanding of equipment condition so maintenance and intervention can be planned around actual requirements while maintaining certification, compliance and operational readiness.

Inspection + commissioning outcomes that matter

- ✓ **Greater confidence in equipment condition**
- ✓ **Safe, reliable start-up**
- ✓ **Reduced unplanned maintenance**
- ✓ **Earlier identification of potential issues**
- ✓ **Improved equipment availability**
- ✓ **Maintained certification + compliance**
- ✓ **Better-informed maintenance planning**
- ✓ **Extended equipment service life**

Our services

From initial installation and commissioning through ongoing inspection and maintenance

We help customers understand equipment condition, identify required intervention and maintain safe, reliable performance. Our teams combine practical field expertise with OEM knowledge to support equipment throughout its operational life.

Installation + Commissioning	We support equipment installation, functional testing and commissioning to prepare systems for safe operational service.
Preventative Maintenance	We develop and deliver planned maintenance activities that protect equipment condition and reduce the risk of unexpected failure.
Corrective Maintenance	We identify and address equipment issues to restore safe, reliable performance.
Inspection + Assessment	We inspect equipment and systems to understand condition, identify defects and determine required intervention.
Recertification	We support inspection, repair and recertification requirements for drilling equipment and rig structures.
Maintenance Programs	We develop structured maintenance support around equipment type, condition, operating environment and customer requirements.

Why BENTEC?

- **OEM understanding**
  Inspection informed by knowledge of equipment design, engineering, manufacturing and operating requirements
- **Certified capability**
  API-certified workshop capability supports inspection, repair and recertification
- **From finding to fix**
  Where inspection identifies an issue, BENTEC can support repair, overhaul, replacement or upgrade
- **Field + workshop capability**
  Support can be delivered at customer locations or through dedicated service facilities depending on requirements
- **Lifecycle perspective**
  Condition findings can inform future maintenance, obsolescence and investment decisions
