Aftermarket Services

Spare Parts

Supply + Support.

Applications

- BENTEC equipment
- Third party equipment
- Rig systems
- Mechanical equipment
- Electrical equipment
- Planned maintenance
- Critical spares

The Right Part. Where You Need It.

A relatively small component can stop a critical piece of equipment and the cost of waiting can far exceed the value of the part itself.

We support asset managers, maintenance planners and procurement teams with OEM parts knowledge, site-specific spare parts recommendations and worldwide supply.

By helping customers understand which components are critical, what should be held locally and what can be planned around maintenance schedules, we move spare parts from reactive procurement towards a more proactive approach to equipment availability.

Don’t let a part become the reason you stop

Critical spare parts are often only noticed when they aren’t available.

Complex equipment portfolios, long operating lives and changing component availability make it difficult to determine what should be stocked, when parts should be replaced and which alternatives are suitable when original components become obsolete.

At the same time, holding unnecessary inventory ties up capital. Customers therefore need a smarter balance between parts availability, operational risk and inventory cost.

Spare parts outcomes that matter

- ✓ **Greater availability of critical components**
- ✓ **Reduced waiting time during equipment intervention**
- ✓ **Improved maintenance planning**
- ✓ **Reduced procurement uncertainty**
- ✓ **OEM component confidence**
- ✓ **Better visibility of critical spares requirements**
- ✓ **Reduced obsolescence risk**
- ✓ **Inventory aligned with operational requirements**

Our services

From planned maintenance requirements to urgent operational needs

We help customers maintain access to the parts needed to keep critical equipment operating. Combining OEM equipment knowledge with strategic inventory, obsolescence support and worldwide distribution, we help customers plan more effectively, reduce supply uncertainty and protect operational continuity.

OEM Spare Parts	We supply certified components supported by BENTEC equipment knowledge.
Site-Specific Spare Parts Lists	We develop parts recommendations around installed equipment and site requirements.
Critical Spares Planning	We identify and prioritize components where availability is critical to operational continuity.
Consignment Stock	We support access to critical parts through strategically held inventory.
Worldwide Distribution	We coordinate parts supply and logistics to customer operations internationally.
Obsolescence Support	We help identify suitable replacement strategies where components are no longer available or supported.

Why BENTEC?

- **OEM parts knowledge**
  Understand not simply the part number, but where and how the component is used
- **Site-specific planning**
  Parts strategies can be aligned with the customer's installed equipment rather than generic stock lists
- **Worldwide support**
  International distribution capability supports global drilling operations
- **Connected to technical support**
  Parts requirements can be informed by actual equipment diagnosis and repair needs
- **Obsolescence expertise**
  Access to engineering and equipment knowledge supports replacement decisions where legacy components are no longer available
